

Evidence Appendix – Infographic Style (Single Slide)

Discovery Inputs (Simulated Data Sources)

- **8 student conversations** (1st year, qualitative)
 - **Workflow observations** across LMS, calendars, clubs
 - **Benchmark scan** of university apps + AI tools
-

Evidence Artifacts Mapped

- **Quote Table:** Academic & engagement friction points
 - **Pattern Synthesis:** Fragmentation → desire for personalized structure
 - **JTBD:** One place for academics + campus life organization
 - **HMWs:** Centralization & personalization opportunities
 - **Low-Fi Prototype:** Visualizing unified hub
 - **KPIs + Thresholds:** Testing adoption & relevance
-

Key Insight Signals (Condensed)

- Students juggle **4–7 tools** for academics & events
 - **Event discovery is accidental** → 60–70% miss relevant activities
 - High need for “**one screen clarity**” across tasks + events
 - **Academic–event overlap** is the most repeated pain point
-

Why This Matters

All signals converge toward one conclusion: students need a **centralized, intelligent assistant** that reduces friction, simplifies decisions, and improves engagement alignment.
