

Executive Brief

1. NaBC Summary

Need

University students struggle with a **fragmented academic and campus-life ecosystem**. They manage deadlines across multiple platforms, receive slow/unclear feedback, discover events randomly, and face overlapping schedules.

They need a **single intelligent system** that provides clarity, organization, and personalized relevance.

Approach

An integrated **AI Student Companion** with two layers:

1. **Academic Layer** – AI teaching support, automated assessment, instant feedback, personalized learning paths, unified timetable.
2. **Engagement Layer** – Student segmentation (interests, programs, clubs), personalized event recommendations, conflict-free activity planning.

Value: One centralized and adaptive assistant improving academic performance and campus engagement.

2. Evidence Summary

Based on simulated user discovery:

- Students use **4–7 different tools**, leading to information scatter.
- **60–70%** miss relevant events due to accidental discovery.
- Strong demand for **faster feedback** and “one place to see everything.”
- Overlapping activities are consistently reported as the top frustration.

Insight: Students want **clarity + relevance** across academic and social decisions.

3. Hypothesis & Initial KPI

Core Hypothesis

If provided with a unified AI companion, **students will experience stronger clarity, control, and relevance**, motivating early adoption.

Primary KPI

Downloads by 1st-year students during initial pilot (proxy for perceived usefulness).

- **Go:** $\geq 60\%$
- **Review:** 40–59%

- **No-Go:** < 40%

Secondary KPIs

- Improvement in feedback speed and task organization
 - % of recommendations rated “useful”
-

4. Adoption Plan (Condensed)

Digital Culture

- Promote a data-positive mindset: “one hub for everything.”
- Encourage faculty to integrate AI-supported teaching and feedback.

Adaptive Leadership

- Early champions: program directors, tech-friendly faculty, student ambassadors.
- Communicate the tool as workload-reducing, not additional work.

Transformation Steps

1. Phase 1: Pilot with 1st-year students and selected faculty.
2. Phase 2: Expand to all programs; add segmentation-based recommendations.
3. Phase 3: Integrate timetable, assessment, and club management into one workflow.

Governance

- Clear guidelines for AI transparency, data use, and academic integrity.
- Faculty oversight on feedback accuracy; student control over personalization settings.

Metrics

- Adoption rate
 - Daily/weekly active use
 - Time saved on planning
 - Student satisfaction with clarity and relevance
-
