

Dasmeet Makhija – Ghazal Koobchi

Test Card

1. Hypothesis

If first-year students use an AI-optimized unified timetable, weekly active usage will reach $\geq 30\%$, and missed mandatory sessions will decrease by $\geq 15\%$.

2. KPIs

- **Primary KPI:** Weekly Active Usage (WAU) $\geq 30\%$

- **Secondary KPIs:**

- Missed sessions $\downarrow \geq 15\%$
 - Activation $\geq 50\%$ in first 14 days
 - Recommendation relevance $\geq 20\%$ “useful”
-

3. Threshold

- **GO:** $\geq 15\%$ improvement
 - **PIVOT:** 5–15% improvement
 - **STOP:** $< 5\%$ improvement
-

4. Time Window

- Pilot Duration: **4 weeks**
 - Week 1: onboarding
 - Weeks 2–4: usage + attendance measurement
-

5. Risks

- Low onboarding / participation
 - LMS or SIS data delays
 - Inaccurate AI recommendations
 - Notification fatigue
-

6. Next Decision

Based on KPI performance:

- Scale to more programs (GO)
- Adjust features or messaging (PIVOT)
- Redesign scheduling model (STOP)
